

BUILDING ENCLOSURE SYSTEM

As buildings are being built higher the danger of items falling and hitting innocent pedestrians below is becoming a significant concern. Even a relatively small item falling from a significant enough height could cause devastating consequences to people or property below.

The Aldeck building enclosure system goes a significant way to helping alleviate this concern by totally enclosing the live edge of a building.

THE ALDECK ADVANTAGE IS:

- Enclosure system is attached to the Aldeck telescopic handrail system
- All work is carried out from behind the handrail system, so no dangerous external works
- All work is carried out while standing on the floor slab, so no dangerous high level works
- Enclosure system in standard form goes up to 3.5m high and can easily be adjusted to go to 4.5m high
- Enclosure system can easily follow contours of the floor or roof system above

THIS IS A DEBRIS RESTRAINT SYSTEM ONLY. THIS SYSTEM SHOULD ONLY TO BE USED IN CONJUNCTION WITH THE ALDECK TELESCOPIC HANDRAIL SYSTEM.
